

## READ ME FIRST

### PPP Dialup Access

The User Guide may fail to mention that when logging into SVPAL for PPP access users should enter their SVPAL email address in the User name field. In this example, the user name is **janedoer**:

User name: **janedoer@svpal.org**

Password: **herpassword**

Note that this form of User name should only be used for establishing dialup access for PPP. For Text-only dialup access, enter just the User name (e.g. **Janedoer**).

### Name Servers

When performing PPP setup, it is best to allow automatic assignment of DNS name servers. However, some older versions of Windows may require manually setting the name servers. In this case the name servers to specify are:

209.68.147.66

209.68.147.69

### Email Setup

Detailed email setup instructions are not included in the User Guide. Detailed instructions for setting up Outlook Express may be found at the SVPAL web site at <http://www.svpal.org>. You may access the SVPAL web site by starting your Internet web browser and [www.svpal.org](http://www.svpal.org) in the "address" field at the top of the browser window. On the SVPAL page, click on the Support link to access the support area. Click on the link "Configuring Outlook Express," to view the step-by-step set up instructions.
